Serial No.:10/549,767 Filing Date: April 3, 2006

## **Amendments to the Claims:**

This Listing of Claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1-16 (canceled)

17. (currently amended) A process for extracting oxygenates from a hydrocarbon stream containing a range of hydrocarbons in the C<sub>8</sub> to C<sub>16</sub> range, the process including the a liquid-liquid extraction step of extracting contacting the hydrocarbon stream with a solvent comprising a mixture of methanol and water to extract the oxygenates in a liquid-liquid extraction process using a mixture of methanol and water as the solvent from the hydrocarbon stream,

wherein an extract from the liquid-liquid extraction <u>step</u> is sent to a solvent recovery column from which a tops product comprising methanol, olefins and paraffins is recycled to the <u>liquid-liquid</u> extraction step, thereby enhancing the overall recovery of olefins and paraffins.

- 18. (currently amended) The process according to claim 17, wherein the <u>an</u> aqueous phase of a bottoms product from the solvent recovery column is recycled to the extraction step.
- 19. (currently amended) The process according to claim 17, wherein the <u>liquid</u> liquid extraction step takes place in an extraction column.
- 20. (currently amended) The process according to claim 17, wherein the solvent introduced to the <u>liquid-liquid</u> extraction step has a water content of more than 3% by weight.
- 21. (previously presented) The process according to claim 20, wherein the solvent has a water content of from 5% 15% by weight.

Serial No.:10/549,767 Filing Date: April 3, 2006

22. (previously presented) The process according to claim 17, wherein the olefin/paraffin ratio of the hydrocarbon stream is substantially preserved after the extraction step.

- 23. (previously presented) The process according to claim 19, wherein a raffinate from the extraction column is sent to a stripper column from which a hydrocarbon feed stream containing more than 90% by weight olefins and paraffins and less than 0.2% by weight oxygenates exits as a bottoms product.
- 24. (previously presented) The process according to claim 23, wherein the bottoms product contains less than 0.02% by weight oxygenates.
- 25. (previously presented) The process according to claim 17, wherein the recovery of olefins and paraffins over the oxygenate extraction step is greater than 70%.
- 26. (previously presented) The process according to claim 25, wherein the recovery of olefins and paraffins over the oxygenate extraction step is greater than 80%.
- 27. (previously presented) The process according to claim 17, wherein the solvent recovery column includes an extract inlet, an upper overhead outlet and a lower bottoms outlet, with a side-draw located above the extract feed point and below the overheads outlet.
- 28. (previously presented) The process according to claim 17, wherein the hydrocarbon stream is the fractionated condensate product from a low temperature Fischer-Tropsch reaction.
- 29. (previously presented) The process according to claim 17, wherein the hydrocarbon stream contains 5-15% by weight oxygenates.

Serial No.:10/549,767 Filing Date: April 3, 2006

30. (previously presented) The process according to claim 17, wherein the fractionated hydrocarbon condensate product is in the  $C_{10}$  to  $C_{13}$  range.
